

Earth Science Newsletter – March, 2020  
(Mr. Williams ~ Rm. C-423)  
Volume 4, Issue No. 6

Dear Parents/Families:

I hope this brief update finds you well. As we move into March, students are beginning their study of meteorology. This timing is appropriate because the month traditionally comes in like a “lion” and goes out like a “lamb”, allowing the students to experience frequent changes in the weather. The meteorology unit will consist of several laboratory activities, ranging from the monitoring/mapping of current weather to the study of historical weather events and hurricane tracking. The month of March will conclude with the meteorology unit exam.

Looking ahead, not including meteorology, there are only two units remaining: climate and astronomy. We will wrap up with astronomy in late May, and will then enter Regents review mode.

Finally, shout-outs to Molly Ryan, Justin Pham, Tessa Glashauser, and Haania Hamad for their phenomenal mnemonic devices to help remember the sequence of geologic time periods. Their excellent work is currently on display around the classroom.

Honors Only: The 15<sup>th</sup> Annual LHS Earth Science Symposium is coming up on Saturday, March 21<sup>st</sup> (8:30-1:15). I look forward to seeing you all then!

Regards,

Mr. Williams
